

Management Summary

Thesis: Best Practice for a Track & Trace solution for companies running SAP

Author: Philipp Köhler

Company: Movilitas Consulting AG

Supervising tutor: Prof. Dr. Liebstückel (Fachhochschule Würzburg-Schweinfurt)
Alberto Zamora (Movilitas Consulting AG)

Key terms: Track & Trace
SAP Auto-ID Infrastructure
SAP Object Event Repository

Initiation

The company Movilitas Consulting AG, specialized on implementation of Track & Trace, has grown continuously since their foundation in 2006. Movilitas now decided, it is time to establish a training for the core competence of the company. Through the fast growth of the last years it is required to establish a Track & Trace training. This training is realized as a learning map for new employees in order to prepare them for taking up employment. The target of this thesis is to capture all relevant Track & Trace content and summarize it as a best practice for a Track & Trace solution for companies running SAP.

Procedure

The best practice solution for Track & Trace, realized with SAP software components, splittes the thesis in five parts. As first Track & Trace is defined and described in general. Up next all the relevant standards, used in the best practice, are explained. After an process overview about the SAP Secure Tracking and Tracing scenario, the Track & Trace software solution components are described in detail and their role in the solution is explained. The next part of the best practice is the implementation of the Track & Trace solution. This implementation covers all the relevant customizing, master data and reporting settings in the software components, which are required for Track & Trace. The last part is the Track & Trace training realized as Learning Map. As an example for the training the implementation part of the learning map is explained in detail with all its contents.

Result

The results of this thesis provided the basis information for the Track & Trace training. This learning map is used as training for Movilitas employees. The construction and the structure of the learning map with their contents, is described in the last thesis chapter. The Track & Trace training is part of the Movilitas Training homepage.
